

APMultitool Beta 1 Overview

BETA 1 · WINDOWS

APMultitool Beta 1 for Windows is now live and available to a small group of trusted testers.

This is the first shipped tool in a planned suite of paralegal tools built around real-world workflows, starting with the way Renee and her team actually handle documents, packets, and matters.

What we have shipped

- bullet A Windows-only beta installer (Beta 1).
- bullet A download page that clearly labels the build as beta.
- bullet Tester-friendly instructions that explain what to try and how to send feedback.
- bullet A working feedback loop based on simple email replies and optional support bundles.

How we are framing the beta

- bullet It is clearly presented as an **early beta**, not a finished 1.0.
- bullet The site explains that Windows may show a standard “protected your PC” message because this is a new app building reputation.
- bullet Testers are told what to click if they intentionally downloaded APMultitool and want to continue, and to cancel if they did not.

The goal is to be honest about rough edges while still giving people a real, usable tool.

Who this beta is for

- bullet Trusted testers and early adopters inside the existing network.
- bullet People willing to try everyday tasks in Compiler, Bates, and File Room.
- bullet People comfortable giving simple, honest feedback in plain language.

How feedback flows

For this first phase, feedback is intentionally simple:

1. Use APMultitool on normal work for a short session.
2. When something feels confusing, broken, or rough, reply by email.
3. Include what you were trying to do, what you expected, and what actually happened.
4. Add a screenshot or support bundle if it helps.

This keeps the loop lightweight and personal while we are still shaping the product.

Why this matters

This beta proves that APMultitool is no longer an idea or prototype:

- bullet There is a real installer, in real testers' hands.
- bullet There is a clear way for people to try it.
- bullet There is a straightforward way for them to talk back to us.

From here, every round of feedback feeds into polish, stability, and the rest of the paralegal tool suite that will follow.
